

Mo Cashman

Enterprise Architecture Director Intel Security

Mo Cashman is the Director of the Enterprise Architecture team at Intel Security. He has over 15 years' experience designing, implementing and managing cyber security solutions for large government and enterprise customers globally. In his current role, Mo advises large customers in Government, Finance and Critical Infrastructure on security transformation and business resilience. In previous roles, Mo was the Chief Security Officer for the Global Public Sector team at McAfee and just prior to joining McAfee, lead a Computer Security Incident Response Team for the US Defense Department in Europe.

Abstract: Getting ready for the new General Data Protection Regulation (GDPR) will be on the minds of many enterprise business and security executives this year. The regulation, which comes into effect in May 2018, is not just about increasing fines and security requirements. It's really about changing organizational culture as it relates to privacy, personal data protection and cyber security in general. Compliance to the new regulation requires more than the deployment of data loss prevention technology. Preparing for data security and reporting conditions of the new regulation within an interconnected, fast-moving digital enterprise involves a holistic review of security strategy across Governance, People, Process and Technology. This presentation discusses evolving your security strategy to focus resources and planning on the most important capabilities.
