Simple DC Motor Control Interface Prototype for Raspberry Pi

Part of the project
Raspberry Pi Real-Time Control Support and Experiments  https://github.com/ppisa/rpi-rt-control/

IRC driver is available at  https://github.com/ppisa/rpi-rt-control/blob/master/kernel/modules/rpi_gpio_irc_module.c

GPIO channel A is connected to GPIO 23 and 24. One for rising and one for falling edge detection.
The dashed line connection of IRC channel B to GPIO7 and 8 is alternative for Raspberry Pi 1 A.
Solid line to GPIO 26 and 27 is better option for all other variants which does not block SPI interface.
